PREFACE

BRAND NAME THERAPEUTIC SUBSTITUTION

THE BELOW LISTED BRAND NAME DRUGS WILL BE SUBSTITUTED FOR THEIR BRAND NAME THERAPEUTIC EQUIVALENT:

NOVOLIN ----- FOR ----- HUMULIN

DRUG FORMULARY

1. Therapeutic listing - (pg. 5-26) lists all FHCP Formulary Drugs based upon their therapeutic class. Comparisons amongst the agents within a class can be made here.
2. Alphabetical listing (pg 27-44) - lists all FHCP Formulary Drugs alphabetically.

The general format for each listing is as follows:

Brand name drugs are listed to the left side of each page and their respective Tier level is to the left of each Brand name drug. Therapeutic alternatives for the brand name, if any, are listed above. Generic alternatives for the brand drug, if available, are listed on the right side of each page and their respective Tier level is to the right of each generic drug. All entries to the right of the brand name drug assure quality and a lower unit of cost. If no entry is made to the right of the brand name drug then no generic equivalent is available. All generics cost ninety five percent less (95%) than its respective Brand name drug AWP

DRUG FORMULARY (cont.)

The drugs listed in this booklet are all on the Federal Exchange QHP (Marketplace) Formulary. This formulary has more drugs on it than are listed in this guide. Please see the online Federal Exchange QHP formulary, the Commercial formulary, or the Medicare Comprehensive formulary at www.fhcp.com for restrictions and the most up-to-date listing of all formulary drugs. Printed copies of the formularies are available upon request from the Pharmacy Services office, 386-676-7173.

The Drug Efficacy Study Implementation (DESI) was a program begun by the Food and Drug Administration (FDA) in the 1960s after the Kefauver-Harris Drug Control Act, which was passed in 1962, required all drugs be efficacious as well as safe. An attempt was made to classify all pre-1962 drugs as effective, ineffective, or needing further study. DESI codes have values of 2-6. Drugs with DESI codes of 2, 3, or 4 are rebatable. Those listed with codes 5 or 6 are not rebatable. For further information, look online for a list of the drugs with codes 5 or 6 and associated National Drug Codes (NDC) that are coded as DESI and therefore are not reimbursable by the Medicare program.

Drugs with HRM listed in the Medicare formulary Restrictions/Limits are High Risk Medications for the elderly. These drugs are not covered by Medicare for patients greater than 65 years without prior authorization.

The effectiveness of the FHCP Drug Formulary, to assure quality pharmaceutical care at a lower contained cost, depends upon FHCP physicians prescribing within the FHCP Drug Formulary and utilizing whenever and wherever possible those drugs that appear to the right of the brand name drug.
