CASE MANAGEMENT DEPARTMENT

Case Management Coordination of Care is designed to address the needs for the highest risk members. The case management process utilizes evidence-based clinical guidelines to conduct comprehensive assessment of the member's condition, evaluates available benefits and resources, develops and implements a case management plan with performance goals, monitoring, and follow up. The overall goal of case management is to empower members in self-management skills, regain optimum health, or improve functional capability through appropriate services and interventions. Case Management is a voluntary program and all eligible members have the right to decline participation.

Criteria for enrollment in Case Management Coordination of Care includes but not limited to members with new diagnoses, acute or uncontrolled chronic diseases, critical events that require extensive use of resources, significant barriers of social determinants of health that limit access to care, or identified from proactive data screening, who may require any of the following:

- Assistance navigating the health care system
- Assistance with monitoring and treatment
- Assistance with barriers related to social determinants of health
- Education on health condition(s) and health coaching
- Education supporting practitioner plan of care
- Coordinate appropriate resources, programs, or benefits
- Coordinate measures to improve quality of life and disease-specific outcomes

There are several case management services that the members will be stratified to:

- **Chronic Complex Care**- assists members with complex health conditions to reduce disease progression and gain empowerment through self-management of lifestyle practices that aims to improve quality of life. Members would benefit from advocacy, education, and navigation to access appropriate care, link to resources, benefits, or programs. Program includes transplant case management.
- **Short Term Program**- assists members with new onset of health diagnoses, transitional care from hospital to home, or link members with high use of emergency room or hospitalizations to FHCP resources. Members would benefit from frequent contact for monitoring and education to understand signs and symptoms for early intervention and gain empowerment with self-management skills to reduce complications and improve quality of life.

Additional Case Management information on the following page

CASE MANAGEMENT DEPARTMENT (continued)

- **In-Home Mid-Level Providers-** Available in Brevard, Volusia, Flagler, and Seminole counties; the RN Case Manager coordinates member care with the mid-level providers to assist homebound members or those with limited support to supplement primary care services in the home or facilitate transitional care for high-risk members discharged from hospital/SNF to home. The goal is to reduce the risk of disease progression; reduce risk of fragmented care; provide early interventions to reduce need for emergency department, hospitalization, and urgent care by provision of primary care or transitional care services. In Home Mid-Level providers promote compliance with follow up care and medication management to reduce complications and enhance quality of care.
- **Community Resource Program-** Community Resource Coordinators partners with members and providers/referral sources to address the barriers to social determinants of health that impact access to healthcare through utilization of agencies and community partners. Community Resource Coordinators complete individualized needs assessments to link members with appropriate existing resources offered through agencies or within their community. CRCs do not address urgent placement or home safety evaluations; physicians would continue to refer members with urgent needs to HHC Skilled Nurse and Medical Social Worker or Department of Children and Families. SNF placement continues to be directed to Utilization Management Department 386-676-7187.
